Data professional with 5+ years of experience designing enterprise SQL data pipelines, PowerBI Service Solutions, Python automation, and healthcare analytics. Proven success in reducing ETL processing times, automating data extraction and validation, strengthening enterprise data quality, and delivering executive dashboards supporting operational and strategic decision-making.

EDUCATION

University of California, San Diego (UCSD) Graduated 2020
Bachelor of Science - Cognitive Science, specialization in Machine Learning & Neural Computation
Minor: Economics

PROFESSIONAL EXPERIENCE

County of San Diego – Behavioral Health Services (BHS)

Administrative Analyst II (Data Analyst) | July 2022 – Present

- Build enterprise healthcare data pipelines using Python (Pandas, PyArrow, DuckDB, pyodbc), SQL Server, Apache Airflow, and Microsoft Fabric, extracting behavioral health claims data into Parquet datasets with incremental refresh architecture, reducing full pipeline runtime from 7 hours to 40 minutes while improving scalability and maintainability.
- Design enterprise Power BI semantic models and executive dashboards using advanced DAX and Star Schema architecture, replacing recurring manual reporting with self-service analytics supporting Billing, Finance, Fiscal, and Electronic Health Records (EHR) leadership.
- Re-engineer the department's claims ETL pipeline by translating complex legacy SQL into optimized SQL using modular Common Table Expressions (CTEs), improving refresh reliability, simplifying downstream maintenance, and enabling future scalability.
- Automate enterprise data validation, reconciliation, and quality assurance workflows using Python, SQL, and VBA, eliminating hours of manual QA per reporting cycle while reducing reporting errors reaching executive dashboards.
- Partner directly with executive leadership and cross-functional stakeholders to define KPIs, translate complex business requirements into scalable BI and data engineering solutions, and deliver data-driven recommendations supporting Behavioral Health, Billing, and Fiscal operations.

County of San Diego – Medical Care Services Division (MCSD)

Supply Chain Analyst (Temporary) | February 2021 – July 2022

- Built GIS-enabled Power BI dashboards integrating SQL Server and operational inventory systems to visualize medical supply distribution across 11 county facilities, enabling proactive inventory management and executive decision-making during countywide public health operations.
- Automated inventory intake using Microsoft Forms, Power Automate, and SharePoint, replacing spreadsheet-based workflows and reducing inventory processing time by 90% while improving real-time operational visibility.
- Developed procurement and logistics KPI dashboards analyzing over \$5 million in purchasing and warehouse operations data, supporting forecasting, strategic sourcing, and executive procurement decisions.
